

As a board member, I am not only a community representative but am also a member of this community that is invested in having the services we deserve. I want a hospital that can serve everyone from my parents to my young children. We may live rural but we deserve a hospital that continually improves quality, services, financial viability and good governance. I have spent the last four years advocating for these and significant improvements have taken place: there are new services such as a pharmacy, telemedicine and soon a health clinic (with plans for another by 2025), financial stability has significantly increased, quality ratings have improved and management has become more strategic. I have utilized my education (MBA, MA, BA) and career skills to help with these accomplishments. I spent my formal career as a strategic and risk management advisor for non-profit and government entities, with many years spent building and managing the risk program for the \$4 Billion Australian international aid agency. I was so grateful to return to my home town to raise my family and have been honored to represent my community. I look forward to continuing improvements and to serve you.
